

Session Eight: Career Exploration

During the eighth club session, the students explored possible STEM career fields and discussed multiple pathways to higher education institutions. Several mentors prepared interactive presentations for the students in which they gave a demonstration of what their work entails. The students asked relative questions to gain a better insight into career possibilities.

Continuing to build goal setting skills, the students completed a Map It! activity around the theme of Hobbies. Each student listed and discussed three hobbies he/she is good at, four fun things he/she would like to get better at, and five new things he/she'd like to try.

The students continued to work on their LEGO Mindstorms robots by programming the robots to follow a black line, throw a ball, and pull heavy objects across the room.
